Delaware Emerging Markets Fund

Portfolio Manager Liu-Er Chen explains how he looks at the opportunity in emerging markets equity and his approach to finding companies poised for growth trading at discounted prices.

Key fund features

- Investment approach geared towards long-term structural growth opportunities—focus on companies versus countries
- Emphasis on companies with franchise sustainability and attractive valuations
- Dedicated emerging market team has managed the fund since 2006

Liu-Er Chen
Portfolio Manager

Delaware Emerging Markets Fund has been providing investors with strong performance since its inception in 1996. The Fund focuses on stock selection to drive portfolio returns.
Q: Describe the Fund and its approach to emerging markets.
A: Our approach, first and foremost, is from a bottom-up, stock picker’s perspective. While we pay attention to what’s happening at a macro level, our primary focus is on the individual company. Second, we focus on the long term rather than get caught up in day-to-day volatility. It’s hard to not get disoriented by the ever-changing news cycle, and we feel our long-term investment horizon helps to cut through the noise. Third, at a company level, we focus on a company’s franchise sustainability as it allows us to direct our attention to what matters most in terms of driving long-term value. Fourth and lastly, we are active managers as we seek to outperform the Fund’s benchmark. This is illustrated by our relatively high active share.

Q: Why should investors consider emerging markets?
A: Emerging market economies are growing faster than developed countries, have rapidly growing populations, and better demographics. (i.e. younger, growing work force) Many of these larger economies are experiencing a rising consumer class, which leads to increased growth opportunities. They are undergoing meaningful structural government reforms as well as rampant innovation, especially within the technology sector. Countries such as China are starting to focus on the “quality” of their growth, rather than growth just for its own sake. These fundamental, structural changes are creating a stronger, healthier, and more robust economy for the companies operating within the emerging markets, which we believe should benefit investors over the long term.

Q: Tell us more about “franchise sustainability”
A: Given the continuous 24-hour news cycle, it’s important to have a disciplined process that keeps you from getting disoriented. Our focus on a company’s franchise sustainability offers a framework that helps direct our attention toward what matters most and the key drivers of long-term value. We look to identify sustainable franchises that have strong competitive positions with high barriers to entry, are benefiting from secular growth opportunities, and have resilient and sustainable businesses that are able to weather issues and possibly strengthen during periods of weakness.

Q: Aren’t emerging markets inherently risky?
A: Emerging markets are a volatile space; we won’t deny that. But it’s also where some of the best investment opportunities can be found. This is why we focus our analysis on trying to understand what a company might look like in five years, and whether it will be able to withstand near-term problems that could arise from any number of sources of volatility — geopolitical issues, economic recession, changes in consumer demand, changes in input prices, and so on. We effectively look for companies that we believe are “future proof”, meaning they have either a portfolio of assets or a competitive market positioning that will allow them to better weather potentially tumultuous times. And in some instances, we’ve experienced companies coming out of a volatile period stronger because weaker competitors simply could not survive.

Q: How do you approach valuation?
A: We approach company valuation in several ways as we customize our analysis to fit the type of business we’re researching. We tend to emphasize a company’s long-term earning power. Our analysis focuses on a company’s, or an operating unit’s, ability to consistently earn returns above its cost of capital — to create value over time that accrues to shareholders. We pay particular attention to upside potential and especially toward downside risk. Ultimately, we are looking for companies that are trading at discounts to their intrinsic values.

We strive to comprehend the effect of structural changes on how people live and to identify companies across the value chain that are best positioned to generate superior returns.”
Emerging markets offer growth at attractive valuations relative to developed markets

Emerging markets valuations and growth prospects are compelling

Q: Would you elaborate on ‘intrinsic value’?
A: By intrinsic value, we simply mean what we believe a company is worth. It’s a subjective assessment that is central to how we think about an investment opportunity and often our analysis differs significantly from how the market is currently pricing a stock. This is partly because we tend to think longer term than typical market participants, as we seek to answer the question: “What will the company look like in five years?”
It’s also because we consider various methods of valuing a company, tailoring them to what makes the most sense given a company’s business model or the assets on the balance sheet. We look for stocks that we believe are trading at a minimum of a 25% discount to intrinsic value.

Q: From a style perspective, do you consider yourself “growth” or “value”?
A: There are elements of both investment styles in our approach; we often own companies that have strong growth potential but we have a strict valuation discipline. How our portfolio characteristics profile at any given moment is more a result of what the market ascribes to the stocks we own at that time. But we’re thinking structurally much further out, so snapshot portfolio statistics do not necessarily reflect our longer-term view on growth potential or valuation. Longer term, it’s probably most fair to consider our portfolio a “core” strategy.

Q: And you are US-based? Is that a challenge given your focus on emerging market countries?
A: We don’t think so. Information is free flowing and we have access to most of what we need at our fingertips. We do travel into our regions of coverage several times a year to get a closer feel for the businesses in their local markets, but this is not as important a factor as it may have been 20 years ago. We also benefit from good company access to corporate management teams.

Q: You have a strong long-term track record; what do you think is the key factor?
A: We believe that consistently applying our investment process is the key driver of long-term performance. We emphasize bottom-up stock selection with a long-term investment horizon rather than top-down asset allocation. We closely observe key developments taking place within the market, and we strive to understand how those affect the long-term competitiveness, growth prospects, and earnings power of individual companies. Based on our analysis, we seek to invest in companies with sustainable franchises, strong growth prospects, and valuations significantly below their intrinsic values.
The views expressed represent the investment team's assessment of the Fund and market environment as of the date indicated, and should not be considered a recommendation to buy, hold, or sell any security, and should not be relied on as research or investment advice. Past performance is not a guarantee of future results.

Carefully consider the Fund’s investment objectives, risk factors, charges, and expenses before investing. This and other information can be found in the Fund’s prospectus and its summary prospectus, which may be obtained by visiting delawarefunds.com/literature or calling 800 523-1918. Investors should read the prospectus and the summary prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. International investments entail risks including fluctuation in currency values, differences in accounting principles, or economic or political instability. Investing in emerging markets can be riskier than investing in established foreign markets due to increased volatility, lower trading volume, and higher risk of market closures. In many emerging markets, there is substantially less publicly available information and the available information may be incomplete or misleading. Legal claims are generally more difficult to pursue. • Investments in small and/or medium-sized companies typically exhibit greater risk and higher volatility than larger, more established companies. • Diversification may not protect against market risk. • The disruptions caused by natural disasters, pandemics, or similar events could prevent the Fund from executing advantageous investment decisions in a timely manner and could negatively impact the Fund’s ability to achieve its investment objective and the value of the Fund’s investments.

Index performance returns do not reflect any management fees, transaction costs, or expenses. Indices are unmanaged and one cannot invest directly in an index. The MSCI Emerging Markets Index represents large- and mid-cap stocks across emerging market countries worldwide. The index covers approximately 85% of the free float-adjusted market capitalization in each country. The MSCI EAFE (Europe, Australasia, Far East) Index represents large- and mid-cap stocks across 21 developed markets, excluding the United States and Canada. The index covers approximately 85% of the free float-adjusted market capitalization in each country. Index “gross” return approximates the maximum possible dividend reinvestment. Index “net” return approximates the minimum possible dividend reinvestment, after deduction of withholding tax at the highest possible rate. The S&P 500® Index measures the performance of 500 mostly large-cap stocks weighted by market value, and is often used to represent performance of the US stock market.

Macquarie Investment Management (MIM) is the marketing name for certain companies comprising the asset management division of Macquarie Group. Investment products and advisory services are distributed and offered by and referred through affiliates which include Delaware Distributors, L.P., a registered broker/dealer and member of the Financial Industry Regulatory Authority (FINRA) and Macquarie Investment Management Business Trust (MIMBT), a Securities and Exchange Commission (SEC)-registered investment advisor. Investment advisory services are provided by a series of MIMBT. Macquarie Group refers to Macquarie Group Limited and its subsidiaries and affiliates worldwide. Delaware Funds by Macquarie refers to certain investment solutions that MIM distributes, offers, refers, or advises. Other than Macquarie Bank Limited (MBL), none of the entities noted are authorized deposit-taking institutions for the purposes of the Banking Act 1959 (Commonwealth of Australia). The obligations of these entities do not represent deposits or other liabilities of MBL. MBL does not guarantee or otherwise provide assurance in respect of the obligations of these entities, unless noted otherwise.
